Yeo & Yeo Manufacturing Industry Lead, Amy Buben

Optimism and Opportunities Based on Strategic Insight

Thank you for taking the time to review our 2018 National Manufacturing Outlook and Insights report — and if you participated in this survey, thank you for sharing your thoughts.

In our second year of reporting, we believe the 75% increase in participation is evidence of the value that this report and Yeo & Yeo and other Leading Edge Alliance (LEA) firms provide our middle-market manufacturing clients across the country and around the world.

For 2018, manufacturers expressed significant optimism for their businesses, the industry, and the economy.

The political focus on manufacturing and movement on tax reform, reduced regulations, and improvements to healthcare undoubtedly provide a foundation for this positive outlook. The growing U.S. and global economies, weak dollar, rising energy and commodity prices, and improved business and consumer confidence also support this outlook. However, we believe the resilience and success our manufacturing clients have created for themselves has as much to do with this optimism as anything.

Regarding priorities for 2018, growing sales, cutting costs, attracting/retaining talent, and utilizing technology to reduce risk and build a competitive advantage remain critically important. We hope these findings provide you some insightful questions to ask and strategic ideas to evaluate around these topics, ultimately helping you grow your business and achieve your goals.

Please don't hesitate to reach out to us to discuss any of the information presented in the following report.

Sincerely,

Amy Buben, CPA, CFE

About Yeo & Yeo CPAs & Business Consultants

Yeo & Yeo is a leading accounting and business consulting firm throughout Michigan with a proven reputation for personal service, commitment to clients and dedication to community support since 1923. Yeo & Yeo's industry-specialized CPAs and consultants provide audit, tax, wealth management, technology and business consulting services for individuals and privately held businesses as well as government, education and not-for-profit entities.

The professionals of Yeo & Yeo's Manufacturing Services Group provide invaluable guidance and support to help manufacturers remain competitive and profitable. We have developed rewarding relationships with manufacturers that have annual revenues of \$1 million to \$200 million and that produce a variety of products and commodities. Many started with us in the early years of their business, and remain with Yeo & Yeo today. To stay on top of industry-related trends, our professionals are active in both local and national manufacturing associations. We understand the challenges facing the manufacturing industry and will help you approach these issues proactively.

2018 National LEA Manufacturing Outlooks and Insights

Regional Economy Rating by Region

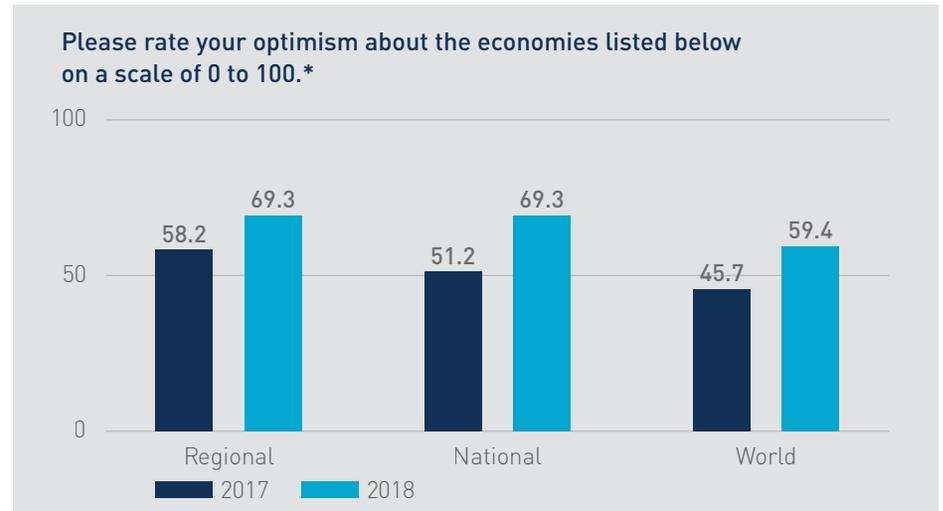

Manufacturers in the western U.S. are most optimistic about their regional economy.

Economic Outlook

Manufacturers are more optimistic about the economy in 2018 than they were for 2017.

While manufacturers rated their optimism for the **regional economy** highest last year, this year their optimism has spread across the country with increased ratings for **regional economy** and **national economy** being equal. Manufacturer optimism for the **world economy** is also higher at 59.4 — almost a 15-point increase over the 2017 outlook.

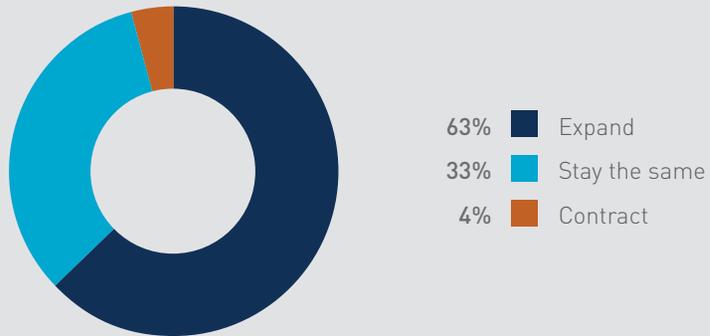

* Averages of respondents in all regions.

Industry Outlook

More manufacturers expect their sectors will expand in 2018 than they did in 2017.

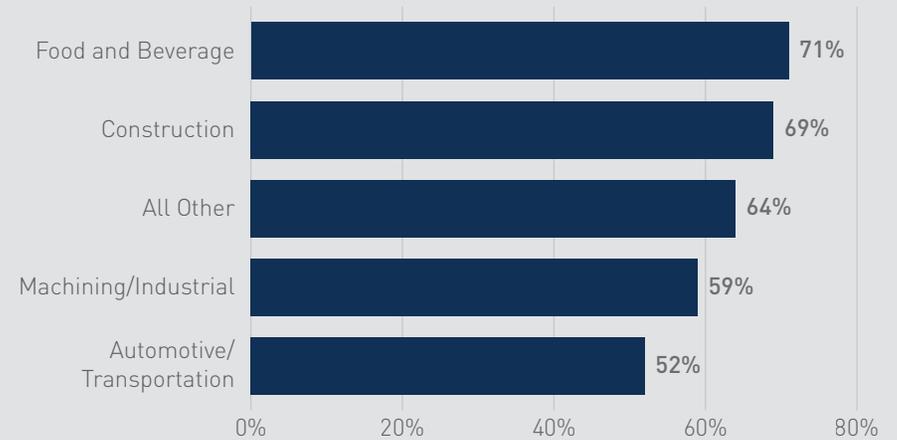

Only 30% of manufacturers expected their sectors to grow in 2017. In 2018, however, that percent has more than doubled to 63%. In addition, the percent expecting it to contract dropped from 10% for 2017 to 4% for 2018.

How do you anticipate your manufacturing sector will change?

Industry optimism is even higher for manufacturers in **food and beverage** and **construction materials**.

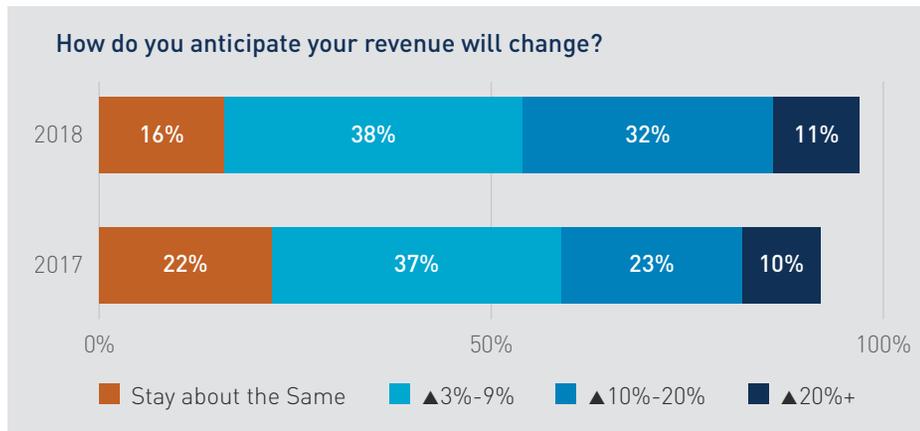

Percent Expecting Sector Growth

Manufacturer Outlook

Many manufacturers anticipate significant revenue growth.

Expected revenue growth is another example of manufacturers' optimism. Only 3% of respondents indicated they expect their revenue to decrease, and only 16% responded that it would stay the same. A remarkable 81% replied that their revenue will increase.

81%

believe revenue
will increase.

Are you prepared for how
increased revenue will
impact your business?

Opportunities and Challenges

Growing sales, cutting costs, and addressing labor issues remain top priorities for manufacturers in 2018.

The top priority for 70% of manufacturers is **growing sales**, and more than half selected **cutting operational costs/improving profitability**. Other priorities selected by more than 40% of respondents include **addressing the workforce shortage**, **seeking new markets for products/services**, and **developing new products/services**.

How will you grow sales while cutting costs?

Beyond labor costs, operational spending increases will focus on growing sales and increasing capacity.

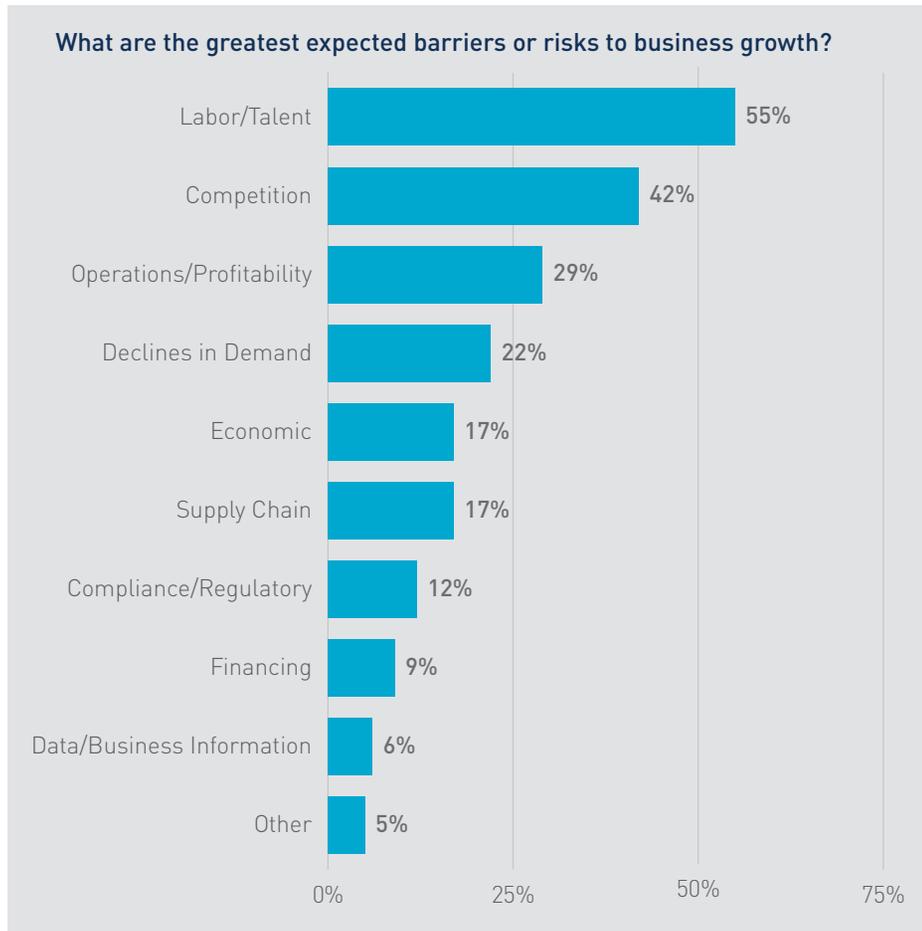

Advertising, marketing, and sales and **new product or service introduction** (both selected by more than one-third of manufacturers) are about growing sales. **Technology** and **facility expansion** (both chosen by approximately one-third of respondents) are about increasing capacity.

Barriers to Growth

Manufacturers will encounter barriers to growth both internally (from the labor gap and operational costs) and externally (from competition).

More than half (55%) of respondents indicated that **labor** would be the greatest risk or barrier to growth for their businesses in 2018. **Competition** was the second most selected barrier (chosen by 42%), followed by **operations** (selected by 29%). **Other** barriers to growth provided by respondents included “materials costs,” “technology,” and disruptions from online markets like Amazon and major distributors.

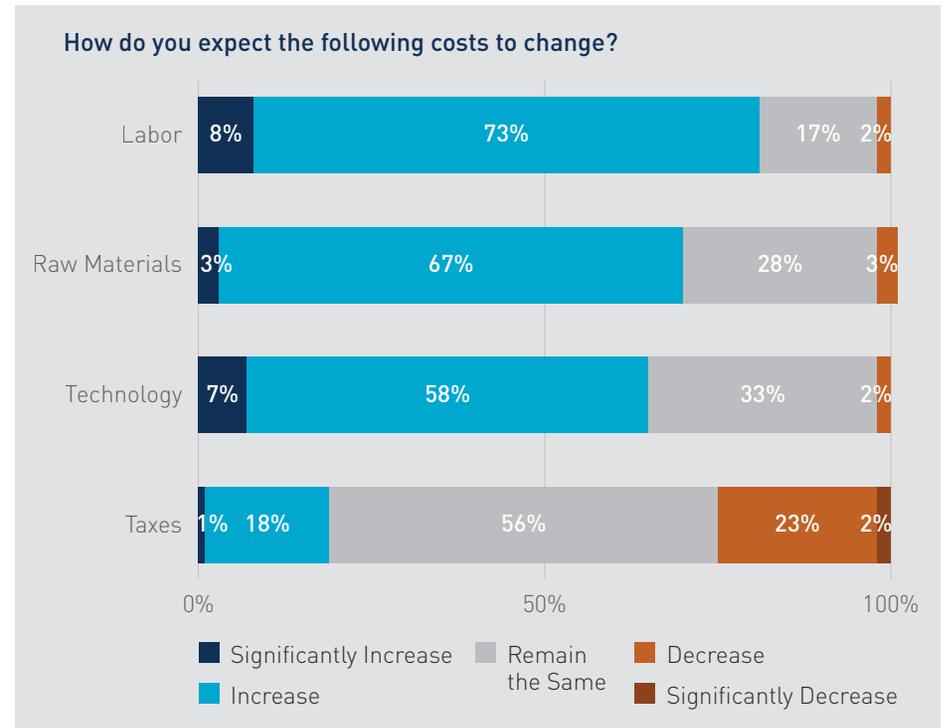

Expense Change

Profitability remains a top concern for manufacturers as few expect their costs to decrease in 2018.

Taxes are the only expense that a significant percent (25%) of manufacturers anticipate decreasing. Most manufacturers (56%) expect tax costs to remain the same as last year, and 19% believe they will increase.

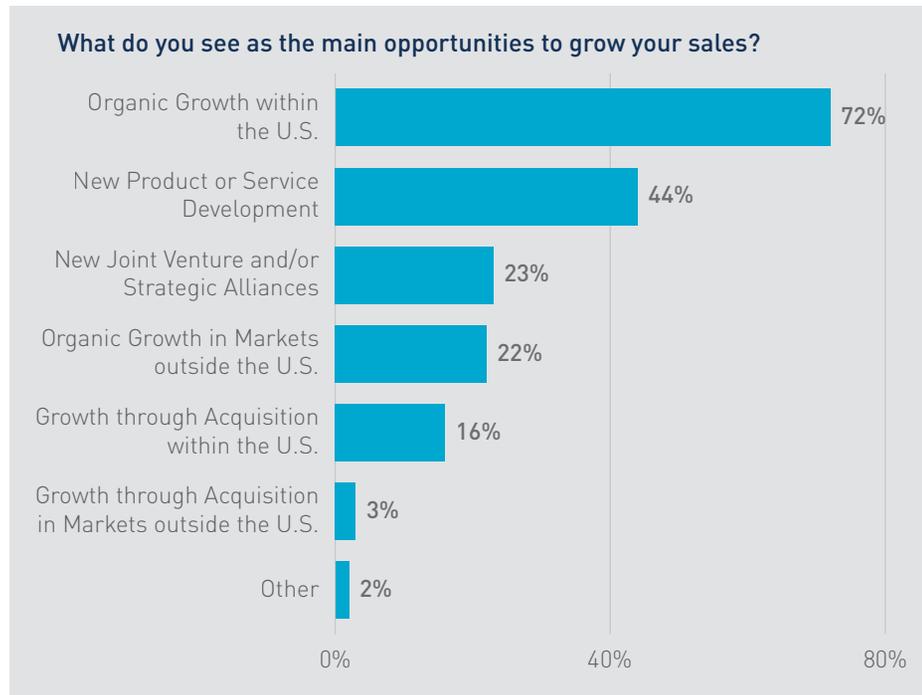

Most manufacturers expect labor, materials, and technology costs to increase. Not surprisingly, labor costs are expected to increase for the highest percent of manufacturers (81%).

Manufacturer Growth Strategies: Growing Sales

Most manufacturers expect to grow sales organically within the U.S. market.

Almost three-fourths of manufacturers see **organic growth within the U.S.** as their primary opportunity to grow sales. This was followed by 44% of manufacturers expecting **new product or service development** and about 20% expecting growth to come from **joint ventures/strategic partnerships** or **organic growth in markets outside the U.S.**

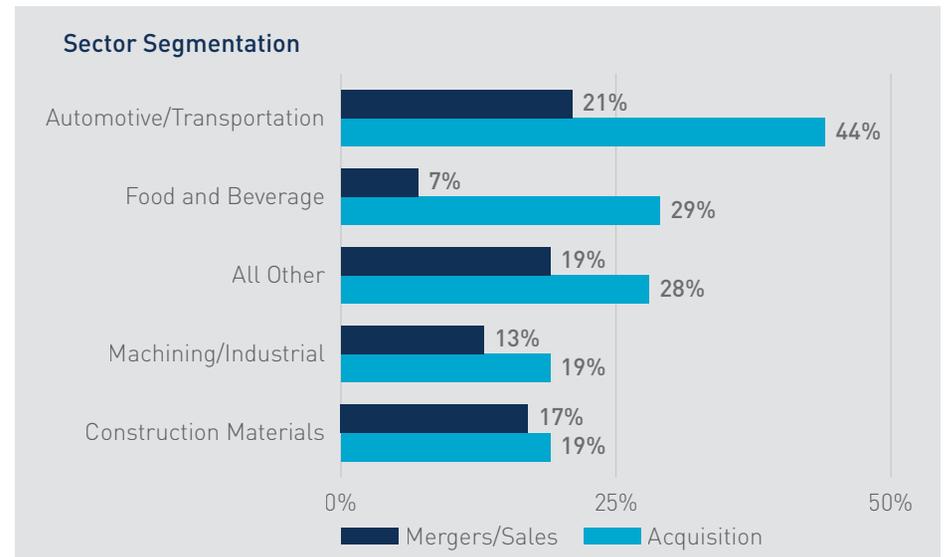

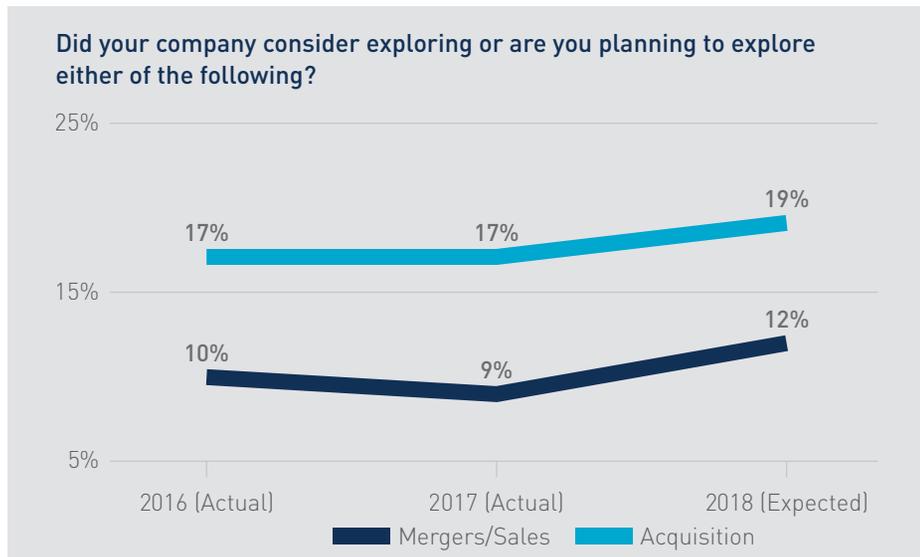

47%
of manufacturers
with international sales
expect those sales to grow.

Manufacturer Growth Strategies: M&A

More manufacturers are exploring mergers/sales and acquisitions in 2018.

Although competition remains high, strategic acquisitions remain a strong means to achieve growth. Overall, a slightly higher percentage of manufacturers are planning to explore mergers/sales and acquisitions during 2018.

Some sectors, including **automotive/transportation** and **food and beverage**, are significantly more interested in acquisitions, and others, such as **construction materials**, are more interested in mergers/sales.

Are you maximizing the full opportunity presented by the R&D tax credit?

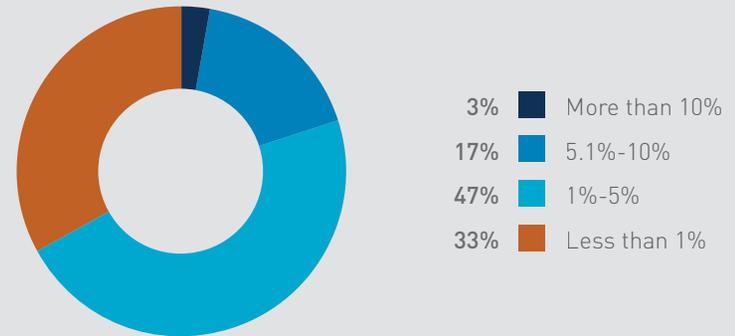

Manufacturing Growth Strategies: R&D

Most manufacturers expect to invest 1%-5% of revenue in R&D during 2018.

The percent of manufacturers investing revenue into R&D remains similar to what was expressed in the 2017 outlook. Most are spending 1%-5% of revenue, one-third are investing less than 1%, and 20% are investing more than 5%.

How much of your revenue will you invest in R&D in 2018?

Manufacturers that invest more in R&D expect significantly greater revenue growth in 2018, and a significantly higher percentage of them believe their sectors will grow.

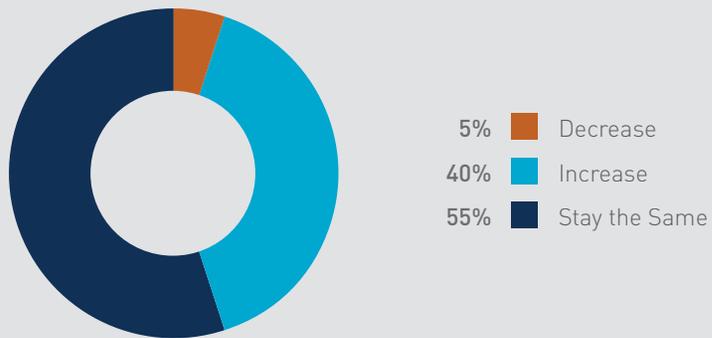

Operational Focus: Inventory Turns

Many manufacturers expect to increase inventory turnover in 2018.

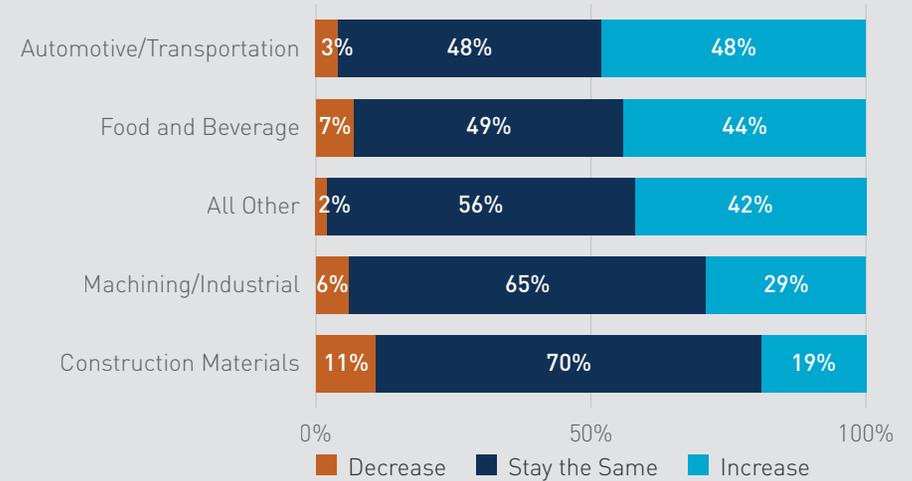

High inventory may mean that capital that could be strategically utilized elsewhere is tied up. While a majority of manufacturers (55%) expect their inventory turnover to remain the same in 2018, 40% expect that rate to increase (with even higher percentages in certain sectors).

A higher percentage of some sectors expect inventory turn increases, including **construction materials**, while a higher percentage of others, such as **food and beverage**, expect inventory decreases.

How do you expect your company's inventory turnover will change?

Sector Segmentation

Operational Focus: Talent

A majority of manufacturers expect to increase their labor force in 2018.

Slightly more manufacturers expect to increase their hiring in 2018 than they did in 2017. Growth, in this already elevated rate, will only make the challenge of finding skilled labor more difficult. Manufacturers continue to search for solutions to this industry-wide issue.

Competition for talent will increase as more manufacturers grow. How will your organization stand out to potential employees?

Operational Focus: Talent

Most manufacturers will try to fulfill talent needs by offering more money.

Alternative strategies, such as **internal training programs**, **reducing turnover**, and **more deliberate succession planning**, will be utilized by a significant number (more than 25%) of manufacturers, and those that are not should consider these strategies. They may require more work, but they may end up costing less in the end.

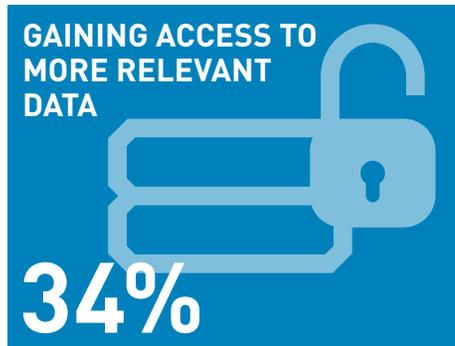

Operational Focus: Technology

Productivity and improving customer service are the top drivers for manufacturing technology investments in 2018.

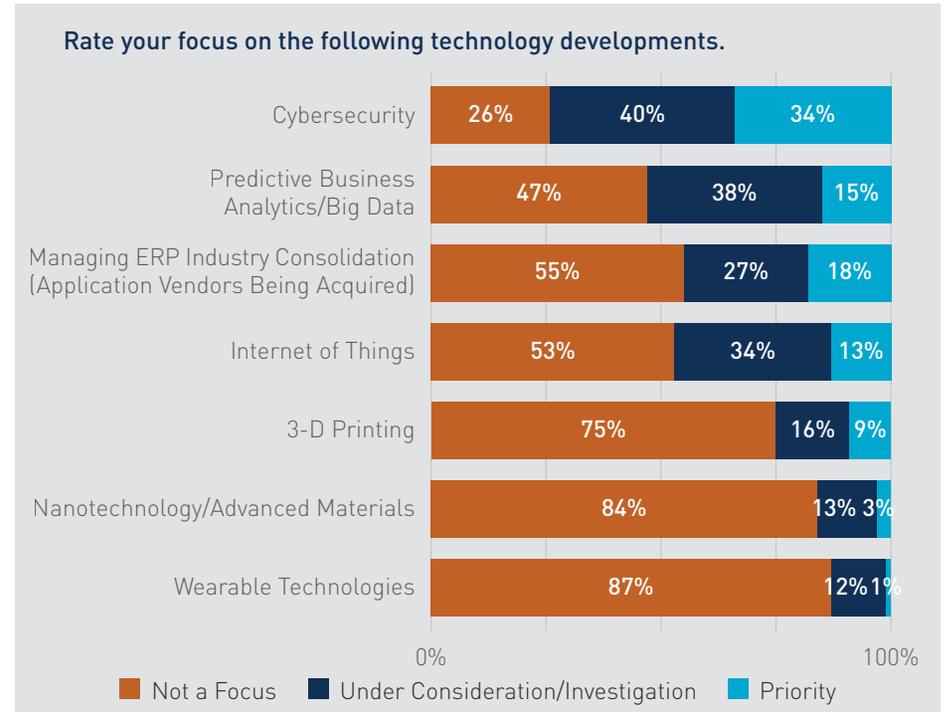

Gaining access to more relevant data and improving product quality, consistency, and/or offering were both selected as technology business drivers for more than one-third of respondents.

Some of the top business drivers impacting technology strategy:

Cybersecurity, by far, is the top technology focus for manufacturers.

Beyond cybersecurity, which seems to appear in the news on a weekly basis, almost 50% of manufacturers are also exploring or prioritizing **predictive business analytics/big data**, ERPs, and the **Internet of Things (IoT)**. Technology developments of less concern to manufacturers include **3-D printing**, **nanotechnology/advanced materials**, and **wearable technologies**, all of which are under consideration or a priority for fewer than 25% of manufacturers.

A Leading Look Ahead

The good news is that manufacturers are rightly optimistic about their own performance and that of the industry and economy as a whole in 2018. We share their optimism and celebrate with the “makers” in our communities that have for too long faced challenging dynamics and troubling trends that dampen the opportunity for their success.

This does not, however, mean that hurdles will not exist in the coming year. Some of those hurdles may become even more significant with economic and industry growth and tax changes:

- While the wage differential between American and foreign workers has shrunk, global growth likely means more competition from manufacturers across borders.
- Increased hiring by manufacturers may help stimulate more interest in skilled labor professions, but this also results in increased wage costs.
- Technology development, an opportunity and a challenge for many manufacturers, will not slow in the coming year. Research has shown that cyber threats are increasing for both manufacturers and small and medium-sized businesses.
- Businesses must continue to identify opportunities and utilize employee intellect, creativity, and commitment to develop and implement strategic plans and processes that will lead to success in 2018 and beyond.
- Tax reform may bring losses (in terms of eliminated credits and deductions) as well as gains (in terms of lower rates). One certainty is that it brings the need for dramatically different tax planning and compliance.

Through all these potential changes, and more, having a team of industry-experienced advisors providing you insight and answers is critically important. We believe the firms of the Leading Edge Alliance are among the best.

While no one can predict with certainty what will happen in the future, we hope our annual National Manufacturing Outlook and Insights survey report offers you a **leading look ahead**.

The growing U.S. and global economies, the weak dollar, rising energy and commodity prices, and improved business and consumer confidence support a positive outlook.

About the Survey

More than 450 manufacturing executives participated in the 2018 National Manufacturing Outlook and Insights survey during October 2017. Importantly, this survey was conducted and this report was written prior to finalization of any kind of U.S. federal tax reform. Responses were collected via an anonymous electronic survey link sent to manufacturers from Leading Edge Alliance (LEA) member accounting firms and through local businesses and industry organizations. The survey was conducted using the Qualtrics online surveying software, which is utilized by more than 8,500 leading businesses around the world. All percentages included in this report were calculated based on total responses to each question and might not equal 100% due to rounding. Most question results are based on more than 300 data points.

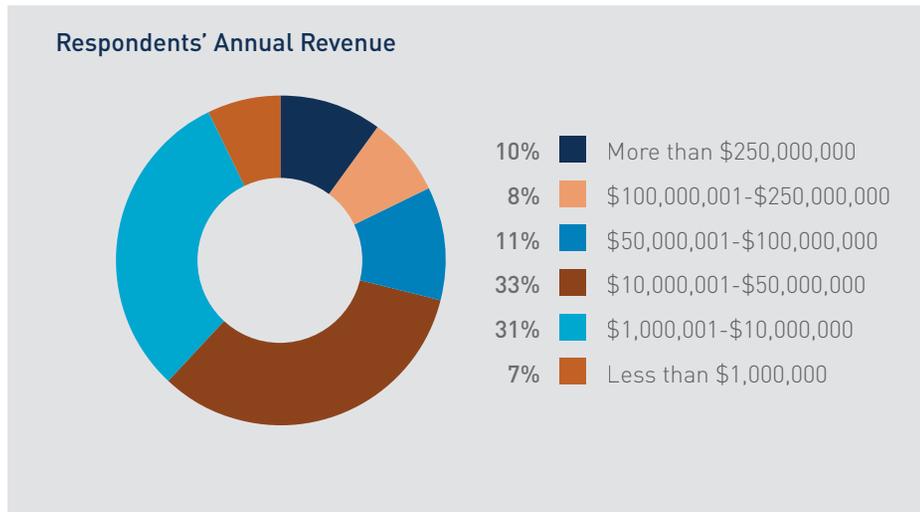

About the Respondents – Location

Of the 455 participants, approximately 200 manufacturers provided their company headquarter locations. The largest segment (52%) came from the Midwest, followed by the South (27%) and the West (21%). Several non-U.S. manufacturers served by LEA firms also participated. Countries included Germany, Japan, Sweden, and Switzerland.

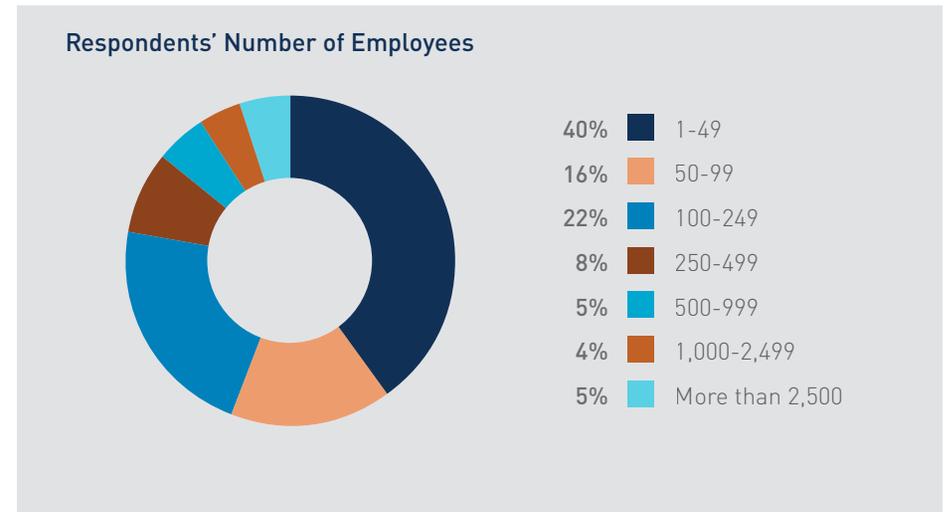

About the Respondents – Annual Revenue

Of the 455 participants, more than 300 manufacturers provided their annual revenue. The median from this list of respondents is in the \$10 million to \$50 million range.

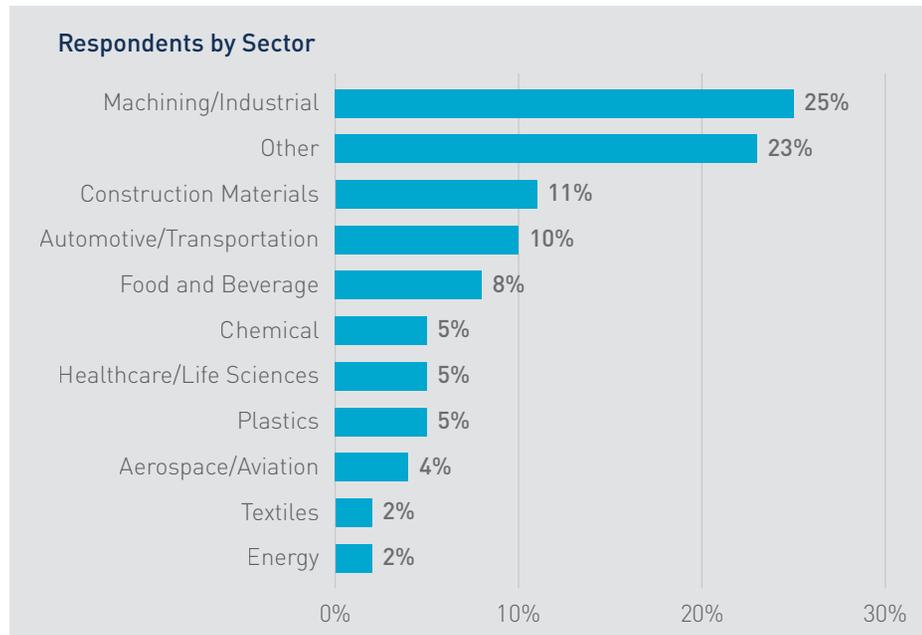

About the Respondents – Employees

Of the 455 participants, more than 300 manufacturers provided the number of employees in their organizations. The median from this list of respondents is in the 50 to 99 employee range.

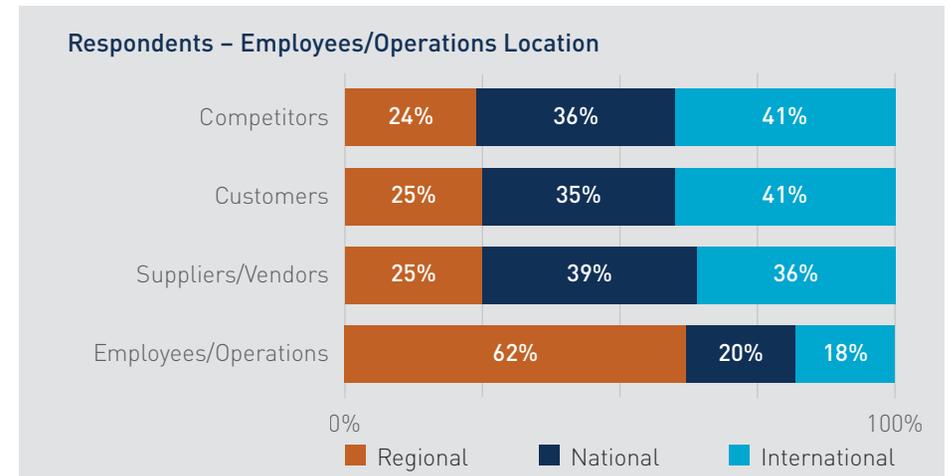

About the Respondents – Manufacturing Sector

Of the 455 participants, more than 300 indicated the manufacturing sectors in which their businesses operate. The “Other” category included manufacturers in printing, packaging, high tech/electronics, and sporting goods. For purposes of segmentation throughout the survey report, respondents in any category with 5% or fewer were included in the “All Other” category. The graph below provides additional detail about these respondents’ sectors.

About the Respondents – Geographic Reach

Of the 455 participants, 62% indicated that their employees and operations were regional, and the remaining 38% was evenly split between national and international. Competitors, customers, and suppliers and vendors were similarly broken down with about 25% regional, about 37% national, and almost 40% international.

About LEA

Founded in 1999, LEA Global/The Leading Edge Alliance is the second largest international association in the world, creating a high-quality alliance of 220 independently owned accounting and consulting firms focused on accounting, financial, and business advisory services. LEA Global firms operate from 620 offices in 110 countries, giving clients of LEA Global firms access to the knowledge, skills, and experience of 2,313 partners and 21,355 staff members.

LEA Global firms' combined annual revenue totals more than \$3 billion. Members stand out as leaders in their markets with firms ranking in the top tiers throughout all the regions of the world. In the U.S., more LEA Global firms are in the top 100 than any other association or network.
